

Florida Attorney General Pam Bondi Launches FortifyFL Incident Reporting App Powered by the AppArmor Award Winning Safety App Platform

Toronto, Ontario, Canada--(BUSINESS WIRE)-- [AppArmor](#), the industry standard in custom mobile safety apps for K12, higher education institutions and healthcare facilities across the globe is proud to [announce in conjunction](#) with The Office of Attorney General in Florida and the Department of Education the launch of the [FortifyFL App](#).

“Our Brave students can provide information that saves lives. The FortifyFL app will give them one centralized tool to report suspicious activity” said [Pam Bondi, Attorney General for the State of Florida](#)

FortifyFL was created and funded by the 2018 Florida Legislature as part of the [Marjory Stoneman Douglas High School Public Safety Act](#). The application was named by students from Marjory Stoneman Douglas High School and developed by AppArmor. The app is a school-related suspicious activity reporting tool that allows Florida students and the community the ability to instantly relay information anonymously concerning unsafe, potentially harmful, dangerous, violent or criminal activities, or the threat of these activities, to the appropriate law enforcement agencies and school officials.

“Awareness is an important part of preventing threats in Florida.” said [Rick Swearingen, Commissioner of the Florida Department of Law Enforcement](#) “FortifyFL allows students, parents and teachers to feel secure reporting possible crimes, threats, or unsafe situations anonymously through an easy-to-use app.

By accessing FortifyFL, students can provide a description of the threat, share pictures and videos and submit contact information (if he/she chooses to receive follow-up from law enforcement or school officials). Once information is transmitted via the application, the appropriate law enforcement and school administration entities are instantly contacted and provided with the submitted material. The tips are then routed to the appropriate contacts at the over 7000 schools on the system, as well as the correct law enforcement contacts.

“As a trusted [safety app](#) and [mass notification](#) provider for hundreds of institutions in the United States, Canada, Australia, Europe and the Caribbean, AppArmor is thrilled to have participated in this tremendous project.” said David Sinkinson, Co-Founder of AppArmor. “We are sincerely thrilled to have the opportunity to help improve the safety and security of Florida students and teachers at over 7000 public and charter schools.”

[President of the United States Donald Trump](#) commented on [Twitter](#): “Great to see @AGPamBondi launch a cutting-edge statewide school safety APP in Florida today - named by Parkland Survivors. BIG PRIORITY and Florida is getting it done! #FortifyFL”

[AppArmor Safety apps](#), the flagship product of AppArmor, give organizations over 50 powerful safety features which can be provided to end-users. This includes advanced reporting options, unlimited push notifications, location services features, geofencing capabilities, and much more. Further, all apps on the platform are fully branded to the organization, leading to significantly higher downloads than other safety app options in the market.

Any organizations interested in the platform are encouraged to contact AppArmor for a [free no obligation trial of the software](#).
